

WATER RESOURCES RESEARCH GRANT PROPOSAL

Project ID: CO1721

Title: Technology Transfer/Information Dissemination

Focus Categories: Management and Planning, None

Keywords: Technology transfer, Information exchange

Start Date: 03/01/2001

End Date: 02/28/2002

Federal Funds: \$30,701

Non-Federal Matching Funds: \$61,404

Congressional District: 4th

Principal Investigator:

Robert Carl Ward

Professor, Colorado State University

Abstract

Networking with the many water groups, agencies and organizations in Colorado to apply the results of water research is the primary purpose of the Institute's technology/information transfer program. The technology transfer process makes research-developed technologies available to water users and managers, and then helps adapt them for practical application in solving water problems. This process must be an integral part of any research and development program. User interaction with project investigators and active participation by water leaders, users and managers in the water research program are key strategies. Results of Institute research are thus transferred to decision makers in both the public and private sectors in the shortest time possible.
